

Intercept X for Mac

Unmatched Mac Protection

Stop the latest cybersecurity threats to Mac devices with top-rated protection and unparalleled visibility. Intercept X combines advanced protection features such as anti-ransomware and malicious traffic detection with detailed XDR capabilities to answer critical IT operations and threat hunting questions.

Advanced Protection

Stop dangerous ransomware attacks with CryptoGuard anti-ransomware functionality that detects and blocks the malicious encryption of files. Affected files are rolled back to a safe, unencrypted state so disruption to business is minimized.

Malicious Traffic Detection (MTD) detects and blocks communications to command and control servers even when an endpoint is not on the corporate network. MTD also performs additional analysis of the process that generated the traffic to convict malware that has evaded other detection techniques.

Extended Detection and Response (XDR)

Sophos XDR provides better accuracy and reduced workload for organizations performing threat hunting and IT ops security hygiene. Starting with industry leading protection reduces unwanted noise, and a prioritized list of detections paired with AI-guided investigations makes it easy to know where to start and quickly act. Native endpoint, server, firewall, email, cloud, mobile and O365 integrations are available in the data lake, or pivot to the device for real-time state.

Synchronized Security

Intercept X shares information with Sophos network, mobile, WiFi, email, and encryption tools. It automatically responds to incidents by isolating infected endpoints, blocking the lateral movement of threats, scanning endpoints on detection of compromised mailboxes and more.

Simplify Management and Deployment

Sophos Central makes managing your devices easy. Policy management, alerts, and reporting are all accessed from the same screen. Sophos Central also provides default policies and recommended configurations to ensure that you get the most effective protection from day one.

Secure Your Entire Estate

Intercept protects your Mac devices wherever they are and makes it easy to manage them all from the same console. Secure devices that are physically on-premises or remote even in mixed (e.g. Mac and Windows) estates.

Highlights

- ▶ Stop the latest cybersecurity threats with top rated endpoint protection
- ▶ Anti-ransomware technology that stops malicious encryption
- ▶ Performs threat hunting and IT ops security hygiene with XDR
- ▶ Synchronized Security shares information in real time and automatically responds to incidents
- ▶ Single management console for Mac devices and mixed estates
- ▶ A single Intercept X user license applies to both Mac and Windows machines
- ▶ Provides 24/7/365 security delivered as a fully managed service

Managed Threat Response (MTR)

Customers can choose to add 24/7 threat hunting, detection, and response delivered by a team of Sophos experts as a fully managed service. Sophos MTR analysts conduct threat hunting, investigate indicators of compromise, and respond to potential incidents.
